- size 82.5 x 52 x 4 mm / 3.2 x 2 x 0.15 inches
- Qi wireless charging (charger not included)
- 2-inch color touch screen.

Some people think  
design means how it  
looks. But of course,  
if you dig deeper,  
it's really how it  
works.

— Steve Jobs

”

#TakeSelfCustodyWithHito

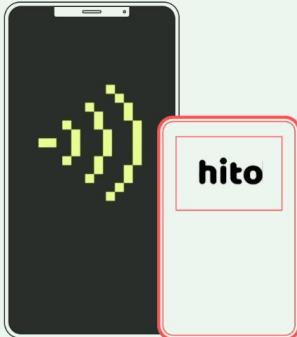

The numbers that your  
custodial exchange  
is displaying in your  
account is just  
a **database entry**, it's  
a number on your screen,  
it isn't proof  
of anything

# YOUR ASSETS IN **FULL COLOR** – FOR FULL CONTROL

## EXTRA SECURE

Hardware wallets offer the best protection  for your crypto assets – they never expose your private keys to the internet. **Wireless and open-source**, Hito takes crypto security even further.

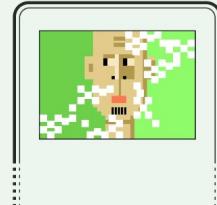

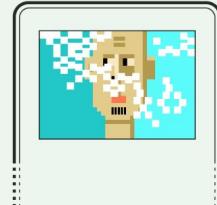

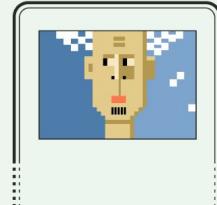

You shouldn't compromise your wallet with a USB-port. That's why Hito uses NFC to connect to your phone

## EASY-TO-USE

You don't need a friend who's been into crypto for a decade to help you figure out how to start using Hito. **Set it up in just 5 minutes**  – and continue using it just as easily.

## FULL-COLOR

Hito comes with a 2-inch full-color  touchscreen. You can interact with it intuitively, just like with your phone. Even more importantly, you can **check the details of every transaction you sign** – and actually see  all the (very precious) NFTs you store.

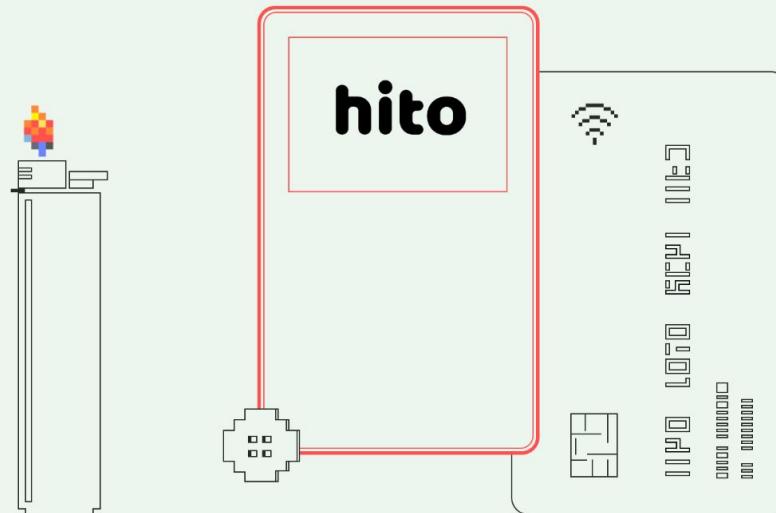

With Hito, you can always see what you own, at any time

## COMPACT

This wallet fits into a wallet – it's a **gadget the size of a credit card**. Well, maybe only a fraction thicker. For your inner ~~geek~~ nerd, here are the exact dimensions: 82.5x52x4 mm / 3.2x2x0.15 inches.

Other wallets resemble a flash drive – small and thick. Hito is different – small and thin

## **AMBITIOUS**

Hito was designed to make your crypto life secure and simple 😊. **Our ambition is to make crypto mainstream.** Everyone – even your Granny or that friend of yours who's still on Skype – should be comfortable with a cold crypto wallet.

# SECURITY

## NFC for your NFT

When it's needed, Hito connects to your phone wirelessly, via NFC – the same way Apple Pay or Google Pay connects to a payment terminal. No USB means there's no way to hack the wallet.

## Open-source

Hito's firmware is open-source. This means it's built on a secure codebase constantly reviewed by the community.

## Made in USA

Every Hito device is made in our lab in San Francisco, California.

# FEATURES

## Built to last

Your most valuable assets deserve something better than plastic. Made of glass and metal, Hito is built to last – and to look great.

## Compatible with all hot wallets

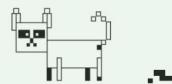

Easily transfer your assets to Hito directly from any existing hot wallet – without any intermediaries

## 600+ digital assets

Hito supports more than 600 types of assets – including Bitcoin, ETH, and ERC20 tokens

## Intuitive app

Pair Hito app on your phone with Hito wallet in just a few taps – and then use the app to approve transactions
